LIFE-Repolyuse approaches the problem of the management of polyurethane foam (PU) waste, by using a new technology which integrates them into a new construction material, a prefabricated gypsum ceiling tile.

September 2018

Start Demo-Site Monitoring

Within the development of the LIFE-REPOLYUSE project, Action B.3 has commenced which is "Pilot of the process in buildings of different typology". The project involves the replacement of the ceiling tiles of these buildings with the new product developed in the LIFE-REPOLYUSE project.

The project also carries out the monitoring of the defined zones for the measurement of energy efficiency and the carbon footprint of the whole process. The steps are as follows:

- Positioning of sensors and calibration of equipment.
- Measurement of the energy indicators in the standard ceiling (12 months).
- Installation of ceiling tiles LIFE-REPOLYUSE.
- Measurement of the energy indicators in the ceiling with LIFE-REPOLYUSE tiles (12 months).

The **Demo-site** of the Project in the University of **Burgos (Spain)** is located on the second floor of the building of the EPS (Milanera), in different areas of the Department of Architectural and Engineering Building and Land. The demonstrator has an approximate area of 350 m2.

The Demo-site of the Project at the Coventry University (United Kingdom) has an approximate monitoring area of 400m² and is located in the Sir John Laing building of the School of Construction, Energy and Environment.

The first phase (Placement of sensors and calibration of the equipment) and the 2nd phase (Measurement of the energy indicators in the standard ceiling (12 months)) began last July in both demonstrators.

1st prototypes

The company Yesyforma (partner of the project) has already manufactured the first prototypes of the tiles for suspended ceilings, with polyurethane foam waste. The pilot manufacturing test is being carried out at the company's facilities in Zaragoza.

Italpannelli

A new collaborator has joined the Project, namely the company Italpannelli Ibérica S.A., which belongs to the Italian group Italpannelli. They are producers of insulating polyurethane (PUR), polyisocyanurate (PIR) and rock wool panels. The company is collaborating with the project, contributing with waste from the production of polyurethane insulation panels from its Zaragoza factory. www.italpannelli-iberica.es

2nd Progress Meeting_Life-Repolyuse

The European LIFE REPOLYUSE project, led by the UBU, held its 2nd progress meeting in Burgos on September 19th. The meeting was led by coordinators the UBU with the participation of beneficiary partners; Exergy Ltd. (United Kingdom), TECSA Empresa Constructora, S.A

Demo-site of the University of Burgos

Kassim Caratella and Dominic Jasinski, technical managers of the environmental consultancy Exergy Ltd (Partner of the Life-Repolyuse Project), visited the facilities of the Higher Polytechnic School (Milanera) of the University of Burgos, to begin the monitoring phase in the Demo-site of the Life-Repolyuse Project. The demonstrator has an approximate area of 350 2 and is located on the second floor ...
